

The Nemadji Trail Energy Center partners of Dairyland Power Cooperative, Basin Electric and Minnesota Power continue to work toward acquiring all necessary permits and regulatory approvals for a 625 MW natural gas plant in Superior, WI.

A Request for Limited Waiver (“Request”) was filed on August 9, 2023, with the Federal Energy Regulatory Commission to extend an already approved generator interconnect agreement for the project. This Request will allow for flexibility of the operational start of the facility and enable us to adapt to changing conditions and timelines associated with the projects’ few outstanding permits. The Request calls for a one-year extension, resulting in an anticipated operational date of December 2028, and outlines an anticipated construction start in the spring of 2024.

The flexible and modern Nemadji Trail Energy Center will lower carbon emissions on the regional grid, enable additional renewable energy and provide jobs and economic development for our region as we advance a clean-energy future.
